1. The following is an examiner's statement of reasons for allowance: The claims have been allowed because claim 1 recites an apparatus for differentiating an item from a stack supported on a surface. The surface having a slot extending across the base of the stack. There is a drive means with a shaft member to be received in a guide means. The shaft member is mounted under the surface. There is a base member connected the guide means to receive the shaft member. There is a pivotal head on the base member. There is a bias means between the base member and the head member for urging the head into an angular orientation so that the head member extends into the slot when in the angular orientation. The reference to Taketsugu et al does not clearly disclose a slot extending across the base of a stack and the pivotal head member. Also the reference to Cunningham does not disclose that the pivotal head is urged into an angular orientation so that the head member extends into the slot when in the angular orientation. Claim 11 recites the matter of claim 1 along with an adjustable means between the base and head for limiting the extent of angular orientation. Claim 15 recites the matter of claim 1 along with the specific threaded shaft member and its structural relationship with the port of the base member. . . Claim 16 recites the matter of claim 15 also with the base member having an adjustable stop means for limiting the angular orientation of the head member. . .

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
